DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 12, 2009 has been entered.

Response to Amendment

2. The Examiner acknowledges the amended claims filed on February 12, 2009. **Claims 1, 5 and 9** have been amended.

Allowable Subject Matter

3. **Claims 1-9** are allowed.
4. The following is a statement of reasons for the indication of allowable subject matter:
5. **Regarding claim 1**, the main reason for indication of allowable subject matter is because the prior art fails to teach or reasonably suggest, including all the elements of the present claim, that the frame addition processing means adds a .predetermined number of frames to the image data, wherein the frame addition processing means

varies the frame rates of the image signal to any integer by adding frames to the image data and by changing an image pick-up frame rate, wherein if it is instructed to reproduce the image signal recorded in the signal-recording-and-reproducing means during recording of the image signal, the control means causes the signal-recording-and-reproducing means to reproduce the recorded image signal at a reproduction frame rate and the control means causes the monitor image signal generation means to generate the monitor image signal that displays simultaneously on one screen a picked-up image based on the image signal generated by the image signal generation means and a reproduced image based on the image signal reproduced by the signal-recording-and-reproducing means.

6. **Regarding claim 5**, the main reason for indication of allowable subject matter is because the prior art fails to teach or reasonably suggest, including all the elements of the present claim, that the frame addition processing means adds a predetermined number of frames to the image data, wherein the frame addition processing means varies the frame rates of the image signal, to any integer by adding frames to the image data and by changing an image pick-up frame rate, wherein if it is instructed to reproduce the image signal recorded in the signal-recording-and-reproducing means during recording of the image signal, the control means causes the signal-recording-and-reproducing device to reproduce the recorded image signal at a reproduction frame rate and the control means causes the monitor image signal generation means to generate the monitor image signal that displays simultaneously on one screen a picked-

up image based on the image signal generated by the image signal generation means and a reproduced image based on the image signal reproduced by the signal-recording-and-reproducing device.

7. **Regarding claim 9**, the main reason for indication of allowable subject matter is because the prior art fails to teach or reasonably suggest, including all the elements of the present claim, that the frame addition processing portion adds a predetermined number of frames to the image data, wherein the frame addition processing portion varies the frame rates of the image signal to any integer by adding frames to the image data and by changing an image pick-up frame rate, wherein if it is instructed to reproduce the image signal recorded in the signal-recording-and-reproducing portion during recording of the image signal, the controller causes the signal-recording-and-reproducing portion to reproduce the recorded image signal at a reproduction frame rate and the controller causes the monitor image signal generation portion to generate the monitor image signal that displays simultaneously on one screen a picked-up image based on the image signal generated by the image signal generation portion and a reproduced image based on the image signal reproduced by the signal-recording-and-reproducing portion.
